Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The method steps in claims 1-6 are not clearly set forth i.e. it is not clear how a cyclodextrin is combined with a macrolide in order to stabilize said macrolide. Further, claims 7-9 are incomplete in that the steps of producing said macrolide have not been set forth.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Loftsson (U.S. Patent No. 5,472,954) in combination with Mizui et al (EP 1 380 579 A1).

Loftsson discloses a method of stabilizing drugs with cyclodextrin (column 1, lines 10-17), including macrolides (column 10, lines 51-55) but does not disclose specific macrolides encompassed by the present claims. However, since Mizui et al disclose the macrolides encompassed by the present claims (pages 2-9), a person having ordinary skill in the art at the time the claimed invention was made would have been motivated to combine the macrolides disclosed by Mizui et al with cyclodextrins because such a person would have expected cyclodextrins to stabilize the macrolides disclosed by Mizui et al.
